Summary

Website development, E-Commerce, Magento, Project Management, Consultancy

Specialties: eCommerce, Programming, Networks, Server Administration

Experience

The Executive Coin Company
Adobe Commerce Developer & Architect
February 2025 - Present (1 year 7 months)

Responsible for the company's Magento 2 website "executivecoin.com", post production release.

- Maintaining the new infrastructure – AWS, EC2, OVH.
- Fixing bugs, upgrading Magento, upgrading 3rd party modules.
- Optimizing website performance, page loads, digital marketing.
- Implementing new functionality.
- Refactoring code, processes, workflows.
- Managing relationships with 3rd party module providers, and customizations of said modules.
- Managing Jira tickets, scrum and daily stand-ups.

Skills: Adobe Commerce Magento 2 (Custom modules, Upgrades, Migrations), PHP, LAMP, AlmaLinux, BASH, MySQL/MariaDB, XML, JSON, Redis, RabbitMQ, OpenSearch, HTML, CSS, jQuery, KnockoutJS, RequireJS, GIT, APIs (REST & SOAP), Jira, Varnish

Gator Vacuums

Adobe Commerce (Magento) Head Developer
June 2024 - February 2025 (9 months)

Responsible for the company's Magento 2 website "thinkvacuums.com".

- Immediately cleaned up 16 malwares, both compromised/hacked php and phtml files, as well hacks injected into the database.
- Upgraded the Magento from 2.3.7 to 2.4.3-p3. Magento 2.4.4 upgrade is work in progress.
- Upgrade outdated modules to run on PHP 7.4.
- Fixed javascript errors.
- Fixed UI issues for both desktop and responsive modes.
- Cleaned up thousands of hardcoded image urls in template files and database tables for static blocks, static pages, category views and product pages.
- Working on upgrading/replacing the current outdated, old Magento theme with a new, modern one. Work in progress.
- Managing the code base (Scrum Master), pull requests, reviewing code, approving PRs, merging, and pulling on target staging environment using git/BitBucket.
- Implemented Jira for issue tracking.
- Implement a proper process of using BitBucket, the use of branch and pull requests for code reviews – to be used by the internal devs as well as external outsourced team.
- DevOps: Managed the development and production servers, managed disk space, monitored performance, cpu load, managed integration and releases into staging and production.
- Created a new repo for Magento 2 to commit a clean version of the site, free of hacks and malware. Created branches for each Magento upgrade. Once an upgrade passed UAT in a staging environment that branch would be merged into master and released to production during off peak hours.

Skills: Adobe Commerce Magento 2 (Custom modules, Upgrades, Migrations), PHP, LAMP, Ubuntu, BASH, MySQL/MariaDB, XML, JSON, Redis, RabbitMQ, ElasticSearch, OpenSearch, HTML, CSS, jQuery, KnockoutJS, RequireJS, GIT, APIs (REST & SOAP), Jira

Blue360 Media (East Coast)

Adobe Commerce (Magento) Developer/Architect

February 2023 - March 2024 (1 year 2 months)

Remote

- Fixed UI issue with custom map selection, by replacing existing solution with a jQuery map module, requiring updates through ko & require-js.config.
- Clean site from a hack
- Upgrade from Magento 2.3.7 to latest version.

- Breakout custom epub indexing module from a custom docker based repo to internally located in app/code.
- Fix and upgrade epub module's compatibility with ElasticSearch 7.
- Fix bugs and/or broken/unreliable functionality.
- Implement custom functionality.
- Assist with AWS hosting platform & infrastructure.
- Document current infrastructure and deployment process.
- Stabilize deployment process - replace restore from snapshot with proper Git repo merges.
- Document UAT and regression testing.
- Fix epub indexer and integration (hosted on ElasticCache as GO app)
- Optimize site performance.
- Fix Google search console issues.

Adobe Commerce Magento 2 (Custom modules, Upgrades, Migrations), PHP, LAMP, CENTOS, BASH, AWS, EC2, RDS, MySQL/MariaDB, XML, JSON, Redis, RabbitMQ, ElasticSearch, ElasticCache, OpenSearch, S3, HTML, CSS, jQuery, KnockoutJS, RequireJS, GIT, APIs (REST & SOAP), Jira, Solutions Architect, AWS Hosting

GSATi

Adobe Commerce (Magento) Developer/Architect

November 2021 - February 2023 (1 year 4 months)

United States

Responsible for Magento 2 backend development for a huge project hosted on Platform.sh for a client based in Mexico.

Duties including:

- Custom module development - multiple modules written to interface with external APIs
- Multiple API integrations (external sources) - interfaced with external APIs to retrieve product categories and products for importing into Magento, real time inventory checking, employee credits and bespoke credit card balance updates, real time API based promotions, order exporting to external ERP/CRM, backend management of API requests
- Customized Checkout - prescription uploading, store pickup with location, delivery date/time, GPS coordinates retrieval through google maps API in a pop-up in the shipping step, custom billing/shipping attributes, custom order attributes, custom customer attributes, etc.
- Custom discounts based on real time external API interrogation
- Automated highspeed import

- Fixing bugs - with existing custom modules and theme, with Magento core code, and 3rd party module like Stripe, MIT payment method, null quote observers (Magento PR in progress), to name but a few
- Upgrading Magento
- Optimizing performance

Adobe Commerce Magento 2 (Custom modules, Upgrades, Migrations), PHP, LAMP, CENTOS, BASH, AWS, EC2, RDS, MySQL/MariaDB, XML, JSON, Redis, RabbitMQ, Elasticsearch, OpenSearch, S3, HTML, CSS, jQuery, KnockoutJS, RequireJS, GIT, APIs (REST & SOAP), Jira, Solutions Architect, Platform.sh, Commerce Cloud

Moxxi Marketing

Director of Engineering /Lead PHP/Adobe Commerce (Magento) Architect

December 2020 - October 2021 (11 months)

Naples, Florida, United States

Primary objective was the rewrite of the company's flagship SaSS application that manages about 100 Magento 2 websites, remotely. Managing a small team of 3 developers and 1 frontend designer/developer, the new application, V3, has been written with the following features / improvements:

1. Main improvement - the use of magmi to perform high speed product imports. The previous version used Magento's api and as such a 10K product import would take 4-5 days. V3 accomplishes a 20K product import within 10 minutes. Each Magento website has a magmi installation, coupled with an inotify filewatcher. A control file plus import data files are uploaded to the website via ftp from V3, triggering the watcher to invoke a customized magmi launcher that would delete products, import products, update products, reorder categories, reindex, and clear the cache.
2. Concurrent catalog synchronizations (to the same server) - limit controlled by a system setting in V3.
3. Product management and CRUD - the previous version did not have the capabilities of editing products.
4. Wrote custom modules that were implemented as part of the new process: IsCustomProduct, IsCustomCategory, IsDiscontinued, HideEmptyCategories.
5. Category managed and CRUD
6. Magento category / vendor category mapping
7. User managed with ACL - Dealer, Admin, Super Admin
8. Full product image and product (pdf) specifications upload to AWS S3
9. Product import with external image/specs links (including dropbox links)

10. Media tool that uses several algorithms for matching images to product models, allows manual mapping/editing of results, and automatically imports the results
11. Product updater (csv/xls) - with column mapping
12. Vendor management & CRUD
13. Real time synchronization queue management
14. Real time system notifications
15. Dealer login & section - allowing dealers to manage their catalog selections
16. Rebranding the app using the company's new color scheme / assets.

JLB USA

Director Of Technology

March 2020 - November 2020 (9 months)

Deerfield Beach, Florida, United States

Reporting to the CEO, I run the day-to-day technical and development operations of the Company.

Responsibilities:

- Creating Magento, BigCommerce, Shopify, WordPress/WooCommerce, and other solutions as needed.
- Leading and mentoring the team of developers and graphic artists/designers in creating and supporting solutions
- Responsible for the technical infrastructure for the company. Made recommendations to add stability, reduce costs, and increase efficiency.

Accomplishments:

- Stabilized and optimized a client's website that was under attack by an external entity. Successfully reduced load times, eliminated server/application crashes, fixed database corruption, upgraded Magento 2 and all 3rd party modules.
- Setup dedicated development servers for Magento websites on Amazon AWS.
- Managed the company's Siteground, GoDaddy and Amazon AWS platforms.
- Changed company SOP for mock-up creation.
- Architected migration and redesign of Magento websites.
- Provided presales / quotation technical consultation to existing clients for Magento websites.

iRemedy

Director Of Technology

September 2019 - March 2020 (7 months)

Stuart, Florida, United States

As the Director of IT/Engineering, I was tasked with:

1. Management of the tech team
2. Company's production infrastructure - dedicated/virtual servers hosted with Rackspace - maintenance and security
3. Management and development of company's Magento ecommerce sites (v2 and v1).
4. Custom development and maintenance of internal apps: inventory and order management system, sales reporting tool, reps tool.

To achieve the above the following were actions were taken:

- Implemented Jira for issue tracking
- Assigned tickets to dev/production teams based on priority
- Implemented strong github development practices using Kanban.
- Implemented code reviews.
- Optimized server disk usage, memory utilization, MySQL configuration.
- Backed up hundreds of gigabytes of redundant Magento instances that took up space and server resources.
- Downgraded servers where possible to reduce costs.
- Improved server security.
- Improved ecommerce (Magento 2) response times by optimizing custom and 3rd party modules.
- Fixed Magento 2 custom modules that did not work.
- Researched scalability of existing ecommerce site by implementing a dedicated DB server, and a dedicated external search server such as Sphinx and Elastic Search.
- Implemented a QA process and assigned a full time dedicated QA resource
- Supervised refactoring of custom applications; code contained hardcoded urls, database credentials; improper use of database direct connectivity instead of framework models; lack of error trapping; too many nested conditions; etc.
- Supervised and led the rewriting of the internal product information management system (PIM)
- Fixed and refactored API integrations between applications (REST)
- Fixed and refactored API integration with Magento 2
- Fixed Mailchimp abandoned cart email module for Magento 2
- Fixed ZohoCRM integration module in Magento 2
- Rebuild hacked server, and ZohoCRM integration module

Xtreme Vision Systems SRL

CEO

January 2012 - August 2019 (7 years 8 months)

Xtreme Vision Systems SRL offers website development, e-commerce development, magento consultancy/installation/customaization/maintenance, bespoke software, network/infrastructure consultancy and design services.

Pay Serv International SRL

CEO

January 2005 - December 2011 (7 years)

Bucharest, Romania

Pay Serv International SRL offers website development, e-commerce development, magento consultancy/installation/customaization/maintenance, bespoke software, network/infrastructure consultancy and design services.

Stellar Enterprises Ltd

Director

April 2002 - December 2008 (6 years 9 months)

Setup and ran my ecommerce website, offering a paid subscription service, as well as developed website and custom software.

Programming in multiple disciplines, and administration of Windows/Linux servers & Lans.

GNU C/C++ (Linux)

Bash Shell Scripting

Visual Studio C# , C++

PHP, XML, Javascript, CSS, HTML, Ajax, jQuery, Prototype, Mootools

MySQL, PG/SQL, Sqlite, SQLEXPRESS

E-commerce: PayPal, Worldpay, IBill, Verisign

Apache, IIS

- Developed websites (prezentation and e-commerce)
- Developed custom software in C++, C#
- Installed and administered mail servers: Qmail
- Installed and administered sql servers: MySQL, PG/SQL, SQL/2000
- Installed and administered web servers: Apache si IIS
- Project management
- Managed own team of developers offering software support and development

Education

South East London Technical College

Bachelor of Technology (BTech), Engineering, Electronics · (1986 - 1987)

Wrotham Secondary School

· (1985 - 1986)
